

TECHNICAL INFORMATION

1. NEW ENGINE WITH TFI INJECTION

MADE IN SPAIN. Thanks to its new and advanced TFI injection system, it is able to perfectly emulate the sensations, response and feel of the 2-stroke carburettor engines, thanks to its innovative system of 2 Bosch Injectors differentiated for High and Low revs. All this results in an extraordinary immediacy and forcefulness of response, combined with the smoothness and efficiency typical of modern Injection engines.

2. THREE POWER MAPS

3 clearly differentiated Riding Modes as standard, to optimise the power curve and maximise performance: Race Mode (maximum power to make you feel like a real racer on the chrono), Forest Mode (equal parts control and power to enjoy any terrain) Wet Mode (smooth and progressive delivery, ideal for low grip conditions).

3. ELECTRONIC EXHAUST VALVE

A modern electronic exhaust valve automatically manages its opening according to the revs and the position of the throttle, to offer instantaneous and homogeneous performance at all times and in all circumstances.

4. BALANCE AXLE

Equipped with a counter-rotating Balance Shaft, it improves engine stability, minimises vibration and allows the engine to turn smoothly, taking the riding experience to another level.

5. DIAGRAM CLUTCH

More precision, greater control and extraordinary sensitivity. Lighter than traditional models, this clutch provides greater sensitivity and significantly reduces fatigue even in the most demanding conditions.

6. SUSPENSIONS

PSurgical precision at every impact and outstanding stability on any surface and adaptable to any rider and riding style.

It has a 48 mm KYB Inverted Fork, equipped with AOS (Air-Oil Separated) System and Closed Cartridge with black anodised DLC antifriction treatment, and a KYB Monoshock fully adjustable in Preload, Extension and Compression (differentiated in High and Low speed), anchored to a progressive linkage system.

7. EXCEL WHEELS

Durability, lightness and maximum grip. Measuring 90/90' on the front wheel and 140/80' on the rear, these aluminium radial rims, fitted with Michelin Enduro tyres, guarantee impeccable stability and unrivalled traction.

8. RENTHAL FATBAR HANDLEBAR (PRO version)

Absolute control in every manoeuvre. Thanks to its design and variable diameter, this sturdy and stylish handlebar guarantees light-as-air steering and impeccable elasticity in every turn. You'll always be ready to take on any extreme challenge you set yourself.

9. XTRIG ROCS HANDLEBARS AND RED MECHANISED ALUMINIUM HUBS (PRO Version)

Functionality and distinction. Enjoy a wild and safe ride with a seatpost that improves the rigidity of the assembly and reduces vibrations. Its red anodised structure not only ensures greater resistance to wear and tear, but also gives it a more racing look.

In addition, the aluminium hubs machined in red provide that extra lightness and strength, reinforcing the personality of the set.

10. ELECTROFAN (PRO Version)

This PRO version comes with an Electrofan as standard, so you can enjoy an unlimited riding experience even in the most demanding conditions.
