

RIEJU

MR PRO 2024

FORGET THAT THERE ARE LIMITS

RIEJU'S RADICAL MR PRO HAS ARRIVED. JOIN THE FAMILY OF THE MOST DARING ENDURO RIDERS AND EXPERIENCE THE BEST THAT RIEJU HAS TO OFFER!

The **MR Pro 2024** exudes quality; its first-class components and exceptional fit and finish make it Rieju's most sought-after model and one of the greatest options available in the two-stroke enduro market. MR Pro offers fantastic performance and allows you to push your limits and perform at your best in any situation. It's a real mileage-eater that can take on any challenge thrown at it.

The heart of this bike is a **powerful liquid-cooled, 6-speed, 2-stroke single-cylinder engine**, that delivers robust torque and immediate throttle response. What's more, this model comes standard with a **Keihin PWK 38 carburetor**, a **Magura clutch master cylinder** - which makes the clutch pull incredibly smooth - and an **Electric Cooling Fan** that keeps the motor cool in extreme conditions. And like Rieju's other models, the **MR Pro is equipped with an electric starter and backup kickstarter**.

As for the chassis, it shares the same frame and sub-frame as the other models in our Hard Off-Road range: a **frame made from chrome-molybdenum alloy steel** and an **aluminum sub-frame** give the bike the ideal combination of lightness, agility, and precision.

In terms of suspension, the MR PRO takes the KYB suspension found on Rieju's other models to the next level. The spectacular 48mm KYB closed-cartridge fork receives **anti-friction DLC coating for improved small bump compliance and longer seal and bushing life**. The forks are held in place by **red anodized X-TRIG ROCS Triple Clamp**. Both of these features give the bike superior steering precision and exceptional handling. A **KYB gas-charged shock absorber** ensures the rear end of the MR PRO performs as well as the front.

MR PRO 2024

MR Pro is compact, easy to move around on, and has an excellent turning radius. What's more, the MR Pro is light and very agile, with a **dry weight of 105 kg**. The **fuel tank capacity of 9.8 litres** ensures you have the range to get where you want to go, even if the trail turns nasty.

In addition to its technical features, the MR Pro comes standard with:

Renthal TwinWall handlebars and Renthal grips, NG Wave floating front brake disc, red anodized billet hubs laced to black Excel rims, Michelin Enduro tyres, Funnelweb air filter, and two-tone non-slip seat.

We feel the MR PRO is amongst the greatest enduro motorcycles on the market today, and we think you'll agree. This motorcycle is **100% made in Spain** and will provide countless miles of enjoyment and reliability.

All that is missing is the rider.
